

# DETROIT DIESEL® 71 SERIES PISTONS

In this issue, we are helping to identify the style of pistons being used in the Detroit Diesel® 71 series, naturally aspirated 4 valves per cylinder engines.

The trunk style piston is the one piece piston shown below.

The crosshead style piston is the two piece piston shown below. The piston crown separates from the piston body once the piston pin is removed.

We offer several overhaul kits for the 53 series, 71 series and 92 series engines, as well as individual components. Give us a call today if you have questions about these kits or the pistons.
